Summary

Computer Science undergraduate targeting backend/full-stack and cloud SDE roles, with experience building FastAPI/Node.js services, JWT-secured REST APIs, PostgreSQL/MongoDB data layers, and AWS (EC2, S3) deployments with CI/CD, aiming to build reliable developer tools and data-driven applications.

Education

Velammal College of Engineering and Technology
B.E. in Computer Science and Engineering

Madurai, Tamil Nadu
2023 – 2027

Experience

Cloud & Full Stack Web Intern — Reccsar Pvt Ltd

Jun. 2025

- Built **client-support-realtime-chat** and **RailwayPorterSeva** as full-stack web apps with login-based dashboards, role-based access, and backend APIs for real-time chat and porter request management.
- Set up basic CI/CD and cloud deployment so mentors could test new builds without manual setup, **shortening feedback cycles** and making the apps usable as internal/non-profit tools.

Web Development Intern — Kevell Corp

Dec. 2024

- Built **Petimony** and **ErgoCart**, two responsive web apps, including an ergonomics-themed e-commerce interface inspired by the MyFrido concept.
- Implemented reusable frontend components, form handling, and validation with modern web tech, integrating the UIs with existing APIs under mentor guidance.

Projects

Money Mirror — Personal Financial Digital Twin

[GitHub](#)

- Built a **FastAPI-based personal finance app** that lets users enter salary, EMIs, savings, and expenses to simulate cash flow, runway, and low-balance risk over short-term horizons.
- Deployed the app publicly on Hugging Face Spaces** with automated builds using **GitHub Actions** and modular backend logic for scenario simulation and goal tracking.

Marinetaxa AI — AI-Powered Marine Taxonomy Platform

[GitHub](#)

- Built an **AI-driven eDNA species classification platform** that processes FASTQ/CSV sequence data, extracts sequence-based features, and predicts marine species using a machine-learning classifier.
- Developed a **Streamlit dashboard** for batch and single-sequence analysis with confidence thresholding, clustering-based novelty detection, and biodiversity visualizations.

Log Beacon — Log Analysis Backend

[GitHub](#)

- Built a **TypeScript Express backend** for ingesting and querying structured logs with filters for time range, level, service, and search text, plus incident linking.
- Used **PostgreSQL with Prisma** for persistence and added an optional **OpenAI-powered incident summarization** endpoint for faster debugging.

DSA & Competitive Programming

[Leetcode Profile](#) – 320+ problems solved (DSA, Algorithms).

Technical Skills

Programming: Java, Python, JavaScript, C, SQL
Backend: FastAPI, Node.js, Express.js, REST APIs, JWT
Databases: PostgreSQL, MongoDB

Cloud/DevOps: AWS, Docker, Git, CI/CD, Linux
AI/ML: PyTorch, TensorFlow, Hugging Face, OpenCV, LLM
Frontend/Tools: React, HTML, CSS, Tailwind, Postman, Figma

Research Experience

IEEE Author – “ECOSAUR: Empowering Sustainable Choices” (AIDE 2025, NMAM Institute of Technology) [Publication](#)

Awards & Certifications

- First Prize**, Designthon Euphoria'24 – Kalasalingam Univ.
- First Prize**, DesignVerse'26 – VCET.
- First Prize**, Project Expo Techathon'24 – SRIT.
- Harness Certified Continuous Delivery & GitOps Developer.
- NPTEL Elite (Cloud Computing, Software Testing).
- NVIDIA Fundamentals of Deep Learning.
- MongoDB Basics for Students.
- Python for Everybody Specialization (5-course track).

Leadership & Volunteering Roles

- Class Representative (2023–Present).
- Placement Batch Head (2025–Present).
- Committee Head – Academic Cell (2023–Present).
- Eco Club Member, VCET (2024–Present).
